

APPLICATIONxtender

COLLECT, MANAGE AND DELIVER INFORMATION

Business is fueled by the information that is now pouring in from numerous sources including word processing documents, spreadsheet data, even audio and video files. Professionals spend over 500 hours annually reviewing and routing files, and another 150 hours looking for incorrectly filed documents. In order for business to succeed in today's global economy, it must efficiently collect, manage and deliver this information.

ApplicationXtender®(A^x) provides immediate access to virtually any type of data file, by integrating data generation, management and access into a single comprehensive solution. ApplicationXtender enables access through a universal interface for virtually any type of content by intelligently indexing, organizing and storing business information to improve employee productivity and provide a quick ROI.

INTEGRATES DATA GENERATION, MANAGEMENT AND ACCESS

- Easily define as many content management applications and retrieval criteria (indexes) as needed — without extensive programming expertise — to ensure quick retrieval of relevant information
- Supports a wide range of electronic content, from scanned images of paper documents to word processing documents, spreadsheets, X-rays, CAD drawings, reports and voice or video files
- Complete management capabilities with check in/check out, version control, revision control and audit trail functionality, as well as annotation and redaction of document information
- A universal interface for all content provides users with easy access to information to enhance core business activities

EASY IMPLEMENTATION, QUICK DEPLOYMENT

- Easily integrates with your existing line of business applications, leveraging the business value of your documents and other content
- Fast and easy deployment provides fast return on investment (ROI)
- Training requirements are minimal, further speeding implementation and reducing cost

SCALABLE AND SECURE

- User-level security is provided with limited access to information within applications to only authorized users
- Integration with Active Directory Services provides single sign-on and reduces administrative overhead
- Integration with MS Cluster Server provides fail-over capabilities to protect against system downtime

THE HEART OF COMPREHENSIVE CONTENT MANAGEMENT SUITE

ApplicationXtender is the core of OTG's XtenderSolutions® for Enterprise Content Management, which includes the following modules:

- WebXtender™ delivers the content managed and processed within A^x to the Internet or your corporate Intranet
- ERMXtender™ quickly and efficiently processes data generated from enterprise report systems and delivers it to A^x
- WorkflowXtender™ allows you to automate your content intensive business processes, further improving productivity and reducing cost

For these and many other reasons, thousands of organizations worldwide have chosen A^x to help them access and manage their most important information. ApplicationXtender is fully integrated with OTG's award-winning DiskXtender® storage solution, ensuring a long-term, scalable and sustainable solution for collecting, managing and delivering your mission-critical content.

OTG provides XtenderSolutions for Storage, Messaging and Enterprise Content Management. Together, our solutions enable immediate access to infinite storage of business information...an organization's most valuable asset.

For more information contact an OTG representative at 800-324-4222.
